1. CloudID

Duration
6 Months

Link
https://www.cloudid.de

Features
Securityfeatures as encryption and signing of XML Data were used.

CloudID is an OpenID Provider. OpenID is a decentralized Authentificationsystem for webbased services. A so called Single-Sign-On protocol. It allows a user, who is already logged into an OpenID-Provider using a username and password, to login into other systems using an OpenID-URL without having to authentify again by the Relying Parties The portal was enhanced to give more transparancy to the user. With the made changes, the user has a complete access over which data are being sent about him to who.

2. VR-Networld

Duration
12 Months

Link
https://www.vr-networld.de

Features
Displaying statisticdata and graphs to analyse users behaviour.
Development of a Drupal module.

A Single-Sign-On Portal was developed for the Volks- und Raiffeisenbank to unifiy the different authentificationsystems that third-party serviceproviders are using. The protocol SAML 2.0 was used in this project. The Security Assertion Markup Language (aka SAML) is an XML-Framework that allows the exchange of authentification and authorisation data. Because of the sensitivity of the data, a special attention was given to security and privacy in this project.

3. Bildungsspender

Duration
8 Months

Link
https://www.bildungsspender.de

Features
Websearch using theYahoo-API. Parsing of CSV Data. Generation of DTAUS-Data used for moneytransfer in the german banks. Postcardgenerator.

Bildungsspender is a Portal that allows users to donate money to a chosen organisation while shopping online without extra costs. This could be a kidsnurery/ kindergarden, a school, a university, a club/association or a church. The visitor chooses the organisation and the shop and then starts shopping as usual. The organisation will then received a part of the purchased amount. Depending on the shop and the product this amount may vary. Since its founding Bildungsspender has helped people to donate over 3 Mio Euro.
